

Tri-Vent® Series DK

Freeze Discouragement Discharge-air Knife

Eliminate unplanned winter outages with the Tri-Vent® Series DK® Freeze Discouragement Discharge-air Knife.

The Series DK®, easy to install and requiring no external power, redirects a fraction of the blower discharge air to recycle waste heat. By delivering just enough high-pressure, warm air to the filter inlet, exactly where the heat is best utilized, the Series DK® discourages filter freezing caused by hoarfrost, freezing condensate, and snow ingress.

Available with fully automated controls, the Series DK® is available on all Tri-Vent® Series Intake Filter Silencers.
